DECLARATION

We hereby declare that the report of the project entitled "Corporate Connect Platform for Startups(CorpConnect)" is a record of an original work done by us at Swami Keshvanand Institute of Technology, Management and Gramothan, Jaipur under the mentorship of "Mrs. Shalini Singhal"(Dept. of Information Technology) and co-ordination of "Dr. Richa Rawal" (Dept. of Information Technology). This project report has been submitted as the proof of original work for the partial fulfillment of the requirement for the award of the degree of Bachelor of Technology (B.Tech) in the Department of Information Technology. It has not been submitted anywhere else, under any other program to the best of our knowledge and belief.

Team Members

Mehul Mangal,21ESKIT072

Nakshatra Jain,21ESKIT075

Acknowledgement

A project of such a vast coverage cannot be realized without help from numerous sources and people in the organization. We take this opportunity to express our gratitude to all those who have been helping us in making this project successful.

We are highly indebted to our faculty mentor Ms. Shalini Singhal. She has been a guide, motivator source of inspiration for us to carry out the necessary proceedings for the project to be completed successfully. We also thank our project coordinator Dr. Richa Rawal for her co-operation, encouragement, valuable suggestions and critical remarks that galvanized our efforts in the right direction.

We would also like to convey our sincere thanks to Dr. Anil Chaudhary, HOD, Department of Information Technology, for facilitating, motivating and supporting us during each phase of development of the project. Also, we pay our sincere gratitude to all the Faculty Members of Swami Keshvanand Institute of Technology, Management and Gramothan, Jaipur and all our Colleagues for their co-operation and support.

Last but not least we would like to thank all those who have directly or indirectly helped and cooperated in accomplishing this project.

Team Members:

Mehul Mangal, 21ESKIT072

Nakshatra Jain, 21ESKIT075

Praveen Dudi, 21ESKIT084

Chapter 1

Introduction

1.1 Problem Statement and Objective

Startups often face challenges in identifying and reaching out to the right corporates who could act as potential customers, mentors, acquirers, or funding partners. Corporates, on the other hand, seek innovation and strategic partnerships but lack a streamlined way to discover and engage with early-stage startups that align with their goals or CSR mandates. The objective of this project is to build an interactive digital platform that connects startups and corporates region-wise, domain-wise, and interest-wise. The platform will enable matchmaking for business collaboration, B2B sales, mentorship, and CSR funding, thereby creating a win-win ecosystem for innovation and growth.

1.2 Market Survey

Various platforms exist to support startup ecosystems, such as Startup India, AngelList, and LinkedIn. However, most of these platforms primarily focus on investor-startup relations or hiring. Very few specifically focus on structured corporate-startup engagement through CSR alignment and strategic partnerships. Startup India Investor Connect is one of the closest references, offering AI-based matchmaking for investment opportunities. However, a dedicated corporate-startup collaboration portal that integrates matchmaking, CSR under a unified system remains largely unexplored. Our platform fills this gap with tailored features aimed at structured engagement and visibility for both corporates and startups.

1.3 Introduction to Project

The Corporate Connect Platform for Startups is a full-stack digital solution that facilitates targeted interactions between startups and corporates. It is designed to act as a bridge for strategic collaboration, supporting startups in gaining exposure, funding, and mentorship while enabling corporates to discover innovation that aligns with their business interests or CSR goals. The platform includes modules such as user registration and login, profile management, CSR funding applications, and dashboard. The idea was born out of the need to institutionalize and digitize the way corporates and startups connect beyond traditional methods like expos or accelerators.

1.4 Proposed Logic

The core solution is based on a matchmaking logic that considers parameters such as region, domain, business interest tags, and funding needs/offers. The algorithm filters and ranks potential matches for both startups and corporates. For instance, a corporate interested in sustainable tech in Southern India will be matched with startups that have relevant profiles. The backend supports CRUD operations, authentication, and database-driven logic using Node.js/Django and PostgreSQL(Convex). The frontend uses React.js with Tailwind CSS for a responsive UI, and Redux for state management. The platform also includes secure login via KindAuth and role-based dashboards to ensure a smooth experience.

1.5 Scope of the Project

The project targets the Indian startup ecosystem initially, with potential scalability to other regions. It caters to startups seeking B2B partnerships, CSR funding, or mentorship, and corporates seeking innovation or strategic investment avenues. Key deliverables include a web application with secure login, search and matchmaking modules, CSR application workflow, messaging, and admin controls. The platform

aims to be a go-to destination for corporate-startup collaboration, filling a critical void in the innovation supply chain.

Chapter 2

Software Requirement Specification

2.1 Overall Description

The Corporate Connect Platform for Startups is a web-based application that facilitates seamless interaction between startups and corporates. It enables user registration, matchmaking and CSR funding applications. The system is role-based (Startup, Corporate, Admin) and offers personalized dashboards. This section outlines the environment in which the platform will operate, how it interfaces with other components, and the expectations from users and systems.

2.1.1 Product Perspective

2.1.1.1 System Interfaces

The platform consists of multiple modules interacting through RESTful APIs:

- **Frontend Interface:** Communicates with backend services via HTTP/HTTPS using Axios or Fetch.
- **Backend Services:** Node.js or Django-based APIs that serve authenticated requests and database operations.
- **Database Layer:** PostgreSQL(Convex) or MongoDB for structured/unstructured data storage.
- **Third-party Services:** Optional integration with Stripe API, email services (e.g., SendGrid), or analytics tools.

2.1.1.2 User Interfaces

The user interface is developed using React.js and styled using Tailwind CSS. The design is responsive, mobile-friendly, and role-specific:

- **Startup Dashboard:** Profile management, matchmaking, CSR applications.
- **Corporate Dashboard:** View startups, post CSR opportunities, mentor matching.

2.1.1.3 Hardware Interfaces

No special hardware is required beyond standard computing devices:

- **Client Side:** Any modern browser on desktop/laptop/mobile.
- **Server Side:** Cloud-deployed backend running on Linux-based servers (e.g., AWS EC2, Heroku).

2.1.1.4 Software Interfaces

- **Frontend:** React.js, Tailwind CSS, Redux.
- **Backend:** Node.js with Express.js or Django.
- **Database:** PostgreSQL or MongoDB with ORM support.
- **Authentication:** OAuth 2.0 and JWT-based session handling.

2.1.1.5 Communications Interfaces

The system supports communication over:

- HTTPS for secure client-server interaction.
- REST APIs for frontend-backend communication.
- WebSocket (optional) for real-time chat between users.

2.1.1.6 Memory Constraints

The system is optimized for deployment on cloud infrastructure. Approximate memory needs are:

- Client-side: Minimum 4GB RAM for optimal browser experience.
- Server-side: Minimum 8GB RAM recommended for production deployment.

2.1.1.7 Operations

The system will operate continuously with automated deployment pipelines. Operations include:

- Daily database backups.
- CI/CD support for frontend and backend code.
- Role-based access and control.

2.1.1.8 Project Functions

- User authentication and profile management.
- Intelligent search and matchmaking system.
- CSR funding application and tracking.
- Messaging and notification system.
- Admin control over user access and moderation.

2.1.1.9 User Characteristics

- **Startup Users:** Looking for funding, mentorship, and B2B sales opportunities.
- **Corporate Users:** Interested in innovation, CSR spending, and partnerships.
- **Admins:** Monitor platform usage and manage content and user activity.

2.1.1.10 Constraints

- The initial version is web-only.
- Requires consistent internet access.
- CSR processes may be manually verified.
- All user data must be validated and secured.

2.1.1.11 Assumptions and Dependencies

- Users provide valid business and personal information.
- Hosting environment (e.g., AWS) ensures 99.9% uptime.
- External services for email and messaging remain available.
- Platform growth is expected, so modules must be extensible.

Chapter 3

System Design Specification

3.1 System Architecture

The Corporate Connect Platform follows a three-tier architecture: Presentation Layer (Frontend), Application Layer (Backend/Business Logic), and Data Layer (Database Systems). The frontend is built using React.js and Tailwind CSS, providing an interactive and responsive interface for different user roles. The backend, developed using Node.js with Express or Django, handles routing, authentication, matchmaking logic, CSR workflows, and messaging. PostgreSQL or MongoDB is used for persistent data storage.

The architecture ensures modularity, scalability, and maintainability. It also allows integration with third-party APIs for notifications and future analytics features. Secure communication between layers is maintained using HTTPS and token-based authentication (JWT/OAuth 2.0).

3.2 Module Decomposition Description

The system is decomposed into the following major modules:

- **Authentication Module:** Handles secure login, registration, and role-based access for startups, corporates, and admins.
- **Profile Management Module:** Enables users to create and manage detailed profiles including domain, region, and interest tags.
- **Matchmaking Module:** Implements filters and algorithms to recommend corporates to startups and vice versa based on region, domain, and interests.
- **CSR Funding Module:** Allows startups to apply for CSR funding and corporates to post funding opportunities.

- **Messaging Module:** Facilitates direct messaging between users after a successful match.
- **Admin Panel Module:** Allows platform administrators to manage user accounts, view platform analytics, and moderate activity.

Chapter 4

Methodology and Team

4.1 Introduction to Waterfall Framework

The Waterfall Model was the first process model introduced in software development and is often referred to as a linear-sequential life cycle model. It is straightforward and easy to understand. In this model, each phase must be completed before the next begins—there is no overlap between phases.

The development process flows sequentially through distinct phases: Requirements, Design, Implementation, Testing, Deployment, and Maintenance. Each phase's output acts as the input for the subsequent phase. This model is best suited for projects with clearly defined requirements and well-understood technologies.

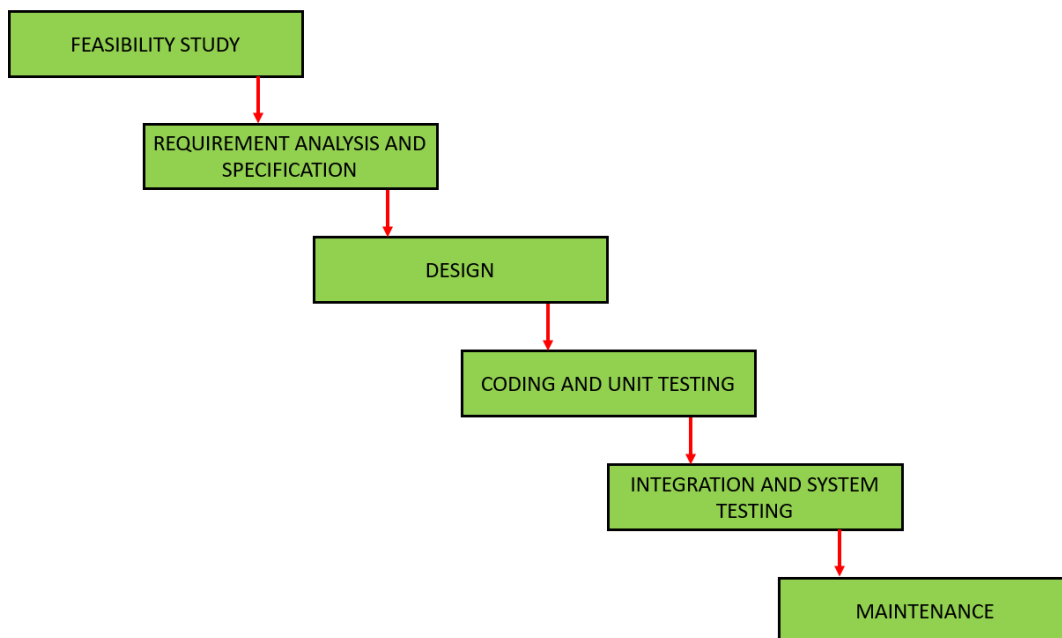

Figure 4.1: Waterfall Model

The sequential phases in the Waterfall model include:

1. **Requirement Gathering and Analysis:** All possible requirements of the system are collected and documented in the Software Requirements Specification (SRS) document.
2. **System Design:** Based on the SRS, a system design is prepared outlining hardware and software architecture, modules, data flow, and user interfaces.
3. **Implementation:** The system is developed as small, functional units. Each unit is independently coded and tested (unit testing) before integration.
4. **Integration and Testing:** Once all units are developed and tested, they are integrated into a complete system. This system is then tested for bugs, integration issues, and logical failures.
5. **Deployment of System:** After successful testing, the product is deployed in the production environment for real-time use.
6. **Maintenance:** Post-deployment, any issues or changes required by users are handled in this phase. It involves bug fixing, updates, and performance improvements.

All these phases are cascaded in a step-by-step manner, hence the name "Waterfall". The next phase only begins when the previous one has been completed and formally signed off.

Advantages of Waterfall Model:

- Allows for structured planning and progress tracking.
- Clearly defined stages with well-documented deliverables.
- Easy to manage due to its rigid model structure.
- Suitable for short-term projects with fixed requirements.

Disadvantages of Waterfall Model:

- Difficult to accommodate changes once a phase is completed.

- Late discovery of bugs as testing is performed only after implementation.
- Not ideal for complex, long-term projects where requirements may evolve.

4.2 Team Members, Roles & Responsibilities

- **Member 1 – Your Name:** Project Leader and Frontend Developer Responsible for UI design using React.js and Tailwind CSS, managing navigation, responsive layouts, and integration with backend APIs.
- **Member 2 – Teammate Name:** Backend Developer Manages database design, API development, user authentication, matchmaking logic, and handles CSR and messaging modules.
- **Member 3 – Teammate Name:** Documentation and Testing Lead Responsible for writing technical documentation, SRS preparation, test planning, and performing unit/integration testing for system modules.

Chapter 5

Centering System Testing

The designed system has been tested through the following test parameters to ensure it meets all functional and non-functional requirements. The testing process helps identify bugs, measure performance, and validate user experience.

5.1 Functionality Testing

In testing the functionality of the web platform, the following features were verified and validated:

1. Links

- (a) **Internal Links:** All internal navigation links such as Dashboard, Match-making, CSR Application, and Profile pages were tested. Clicking each link individually ensured correct redirection and user-specific content loading.
- (b) **External Links:** As of now, no external links are provided. Future versions may include links to partner corporates, startup websites, or external data sources (e.g., government CSR portals).
- (c) **Broken Links:** Comprehensive validation showed that there are no broken links on the platform. All navigational routes are working as expected.

2. Forms

- (a) **Error Message for Wrong Input:** Error messages are triggered upon entering incorrect or missing information. For example, entering an invalid email address or omitting mandatory fields (like password) results in a contextual error prompt.

(b) **Optional and Mandatory Fields:** Mandatory fields are marked with a red asterisk (*). On submission without entering mandatory information, the system displays appropriate messages to guide the user. For example, in the startup registration form, the "Startup Name" and "Email" fields must be filled to proceed.

3. Database

- Database connections were tested for CRUD operations such as user registration, profile updates, matchmaking data, CSR application submissions, and messaging.
- SQL queries were optimized and tested for data integrity, foreign key relations, and input validation.

5.2 Performance Testing

The system was tested for speed, responsiveness, and stability under expected workloads. The following parameters were considered:

- **Page Load Speed:** All major pages (login, dashboard, CSR application form) load within 2–3 seconds on average under normal internet conditions.
- **Scalability:** The backend was tested with mock data for up to 1000 users. System performance remained stable without significant slowdowns.
- **API Response Time:** REST API endpoints responded within 200–400 milliseconds for most requests under test load.
- **Stress Test:** During stress testing with concurrent users, the system maintained session integrity and database consistency.

5.3 Usability Testing

Usability testing focused on evaluating how intuitive and user-friendly the platform is for its different user roles (Startup, Corporate, Admin):

- **Ease of Navigation:** Users could easily access primary features like registration, profile creation, and matchmaking within 2–3 clicks.
- **Design Consistency:** Tailwind CSS was used to maintain a consistent visual theme across all pages. Icons, buttons, and forms followed a uniform layout.
- **Feedback and Error Messaging:** The system clearly communicates success and error messages to guide user actions. Real-time validation is provided for critical inputs like email and password.
- **Accessibility:** Font size, contrast, and button spacing were optimized to support users on both desktop and mobile interfaces.
- **User Feedback:** Initial testers (students and mentors) found the interface easy to use and aesthetically pleasing.

Chapter 6

Test Execution Summary

The Test Execution Summary Report provides a complete overview of the testing process conducted throughout the project lifecycle. While the test plan is prepared at the beginning of the development phase, the test summary report is compiled at the end. It summarizes the test cases executed, the outcomes, and resource consumption. This report helps stakeholders understand the system's quality, coverage, and performance.

The report includes:

- Test Case IDs generated and tracked
- Description of each test scenario
- Status of execution (Pass/Fail)
- Resources consumed (time, tools, and personnel)

Table 6.1: Test Case Execution Summary for Core Modules

S.No	Test Case ID	Test Case Description	Status	Resources Used
1	TC001	User Login and Authentication for Startup	Pass	2 testers, 10 mins
2	TC002	Corporate profile creation and update	Pass	2 testers, 15 mins
3	TC003	Matchmaking filter by region and domain	Pass	1 tester, 12 mins
4	TC004	CSR Funding application submission	Fail	1 tester, 18 mins

S.No	Test Case ID	Test Case Description	Status	Resources Used
5	TC005	Startup profile photo upload validation	Pass	1 tester, 5 mins
6	TC006	Admin user login and dashboard access	Pass	1 tester, 8 mins
7	TC007	Password reset via email link	Fail	1 tester, 7 mins
8	TC008	CSR proposal review and status update by corporate	Pass	2 testers, 15 mins
9	TC009	Duplicate email error handling on registration	Pass	1 tester, 5 mins
10	TC010	Access control verification (role-based)	Pass	1 tester, 10 mins
11	TC011	Logout functionality and session termination	Pass	1 tester, 4 mins
12	TC012	Form validation for registration inputs	Pass	2 testers, 9 mins
13	TC013	CSR proposal file upload restrictions	Fail	1 tester, 7 mins
14	TC014	Cross-browser compatibility test	Pass	2 testers, 20 mins
15	TC015	Mobile responsiveness of landing page	Pass	1 tester, 10 mins

Chapter 8

Project Summary and Conclusions

8.1 Conclusion

The development of the Corporate Connect Platform for Startups has addressed a crucial need in the startup ecosystem - creating structured, region-wise, domain-specific, and interest-based connections between startups and corporates. The platform facilitates meaningful B2B interactions, mentorship opportunities, and CSR funding engagement in a streamlined digital environment.

Throughout the project, we successfully implemented modules for user registration, profile management, intelligent matchmaking, CSR funding applications, secure messaging, and administrative oversight. These features ensure that startups can showcase their innovation and attract the right corporate stakeholders, while corporates can discover high-potential startups aligned with their strategic goals or CSR interests.

The use of modern technologies such as React.js, Tailwind CSS, Redux, and Node.js/Django has ensured a responsive and scalable application design. Rigorous testing has confirmed the platform's usability, performance, and reliability.

In conclusion, the platform not only meets its functional goals but also lays the foundation for future expansion with advanced features like AI-powered matchmaking, analytics dashboards, mobile application support, and blockchain integration for funding transparency. The project delivers a promising solution that has the potential to scale and positively impact the startup-corporate collaboration landscape.

Chapter 9

Future Scope

The current implementation of the Corporate Connect Platform lays a strong foundation for structured engagement between startups and corporates. However, to stay competitive, scalable, and more impactful, several strategic and technical enhancements can be introduced in future iterations of the platform. These improvements aim to increase user adoption, enhance user experience, support cross-border collaboration, and ensure secure, transparent operations.

- **AI-Based Matchmaking Algorithm:** Future versions can include intelligent matchmaking based on user behavior, interests, success rate history, and machine learning models that learn from past interactions and preferences.
- **Mobile Application Development:** Launching cross-platform mobile apps (Android and iOS) would allow users to access the platform anytime, anywhere, ensuring higher engagement and usability for startups and corporates on the move.
- **Integration with Government CSR Portals:** Integration with Startup India, CSR portals, and MSME databases would allow automatic verification of registered users and live syncing of funding schemes and government support programs.
- **Blockchain for Transparency:** Blockchain technology can be adopted to store CSR funding transactions and partnership agreements, ensuring auditability, trust, and immutable logs.
- **Real-Time Analytics Dashboard:** Users (especially corporates and admins) can benefit from dashboards that provide insights such as user engagement, funding pipeline trends, active matches, startup performance scores, etc.

- **Gamification and Rewards System:** A points and badges system can be introduced to encourage profile completeness, active participation in the platform, and successful matches, which will increase engagement organically.
- **Multilingual Support and Regional Expansion:** Incorporate support for Indian regional languages and eventually global languages to make the platform accessible to a broader audience, enabling regional inclusion and global scalability.
- **Mentorship Marketplace:** Introduce a dedicated module for mentorship where corporates can offer structured mentorship programs, and startups can apply based on domain and mentor profile.
- **Third-Party API Ecosystem:** Offer open APIs so third-party tools (e.g., CRM systems, accelerators, incubators) can plug into the platform, expanding its integration scope.
- **Event and Webinar Integration:** Enable hosting of virtual events, B2B meetups, demo days, and CSR hackathons directly on the platform to foster interaction.
- **Startup Rating and Feedback System:** Develop a transparent rating and review system where corporates and startups can share feedback based on collaborations, ensuring credibility and accountability.
- **Premium Plans and Monetization:** Introduce a freemium model with additional premium features like advanced analytics, early access to leads, priority support, and exclusive webinars.
